## SPECIAL NOTICE

If you have questions regarding your subscription, please do NOT call the Arboretum office. CPN uses the Arboretum address for mail, but the Arboretum staff is not involved with any aspect of CPN. Please send any inquiries by letter; your questions will be answered promptly if you enclose a SASE.

Occasionally, as in the case of the March issue, printing difficulties cause an issue to come out later than usual. Please be patient. If it appears that your issue was lost in the mail, we will send a replacement as usual.

Reprints of Volumes I-IV are still unavailable. Please do not send orders for these volumes until notice of availability appears in CPN.

*N & V (Continued from page 31.)*

calculate the prodigious numbers of small insects trapped by one large bushy plant. He placed small bits of beef on some experimental plants and "in some cases" the pieces disappeared. He further observed that trapped insects lived but a short period of time although often held by as few as one to four hairs. So, you folks living near good patches of *Proboscidea* look into this and let us know. At worst, you could end up with some interesting pickles.
